Welcome to Math Camp (2018)

Dept. of Political Science University of Wisconsin–Madison

Instructors:

Michael DeCrescenzo and Micah Dillard

August 20, 2018

Math and Political Science

(Political Science and Math)

Why math?

Math is explicit and specific

Math is explicit and specific

Formalizing: lay out premises and assumptions, derive implications

Math is explicit and specific

Formalizing: lay out premises and assumptions, derive implications

Discover hidden insights

Math is explicit and specific

Formalizing: lay out premises and assumptions, derive implications

Discover hidden insights

Even if you don't do highly mathematical work, you will encounter it

Principled measurement methods

Principled measurement methods

Formally describe patterns in observed data

Principled measurement methods

Formally describe patterns in observed data

Make judgments about statistically meaningful findings (vs. random noise)

Principled measurement methods

Formally describe patterns in observed data

Make judgments about statistically meaningful findings (vs. random noise)

Make causal inferences

Define sets of actors, preferences, incentives

Define sets of actors, preferences, incentives

Derive actors' strategies for optimal payoffs

Define sets of actors, preferences, incentives

Derive actors' strategies for optimal payoffs

Describe trade-offs of certain actions

Define sets of actors, preferences, incentives

Derive actors' strategies for optimal payoffs

Describe trade-offs of certain actions

Dealing with limited information, probabilistic beliefs, learning from new information

Operationally...

Operationally...

- Preparation for methods courses
- Practicing essential arithmetic routines

Operationally...

- Preparation for methods courses
- Practicing essential arithmetic routines

Conceptually...

Operationally...

- Preparation for methods courses
- Practicing essential arithmetic routines

Conceptually...

- Show where political science needs math (using examples)
- Intuitive, conceptual understanding is most important

Operationally...

Conceptually...

- Show where political science needs math (using examples)
- Intuitive, conceptual understanding is most important

You won't memorize everything we cover this week,

but you need to be able to "roll with it" in class

Some material will be unfamiliar (and maybe scary) at first, but...

Some material will be unfamiliar (and maybe scary) at first, but...

• Nobody expects you to be an expert by the end of math camp (that isn't the point)

Some material will be unfamiliar (and maybe scary) at first, but...

- Nobody expects you to be an expert by the end of math camp (that isn't the point)
- The point is intuition and application, not proofs or overly tricky examples

Some material will be unfamiliar (and maybe scary) at first, but...

- Nobody expects you to be an expert by the end of math camp (that isn't the point)

Some material will be unfamiliar (and maybe scary) at first, but...

- Nobody expects you to be an expert by the end of math camp (that isn't the point)
- The point is intuition and application, not proofs or overly tricky examples

How do I know you will be fine?

• I had a weak math background (never took calculus until grad school)

Some material will be unfamiliar (and maybe scary) at first, but...

- Nobody expects you to be an expert by the end of math camp (that isn't the point)
- The point is intuition and application, not proofs or overly tricky examples

- I had a weak math background (never took calculus until grad school)
- I skipped math camp (was out of town)

- I skipped math camp (was out of town)
- Different areas of research emphasize different areas of math (and specialization is the norm)
- You get out what you put in

Questions so far?

Agenda

Mornings (9–12ish): math lessons

Lecture slides, definitions, examples

Lecture slides, definitions, examples

Afternoons (1–3ish): practice

Take-home exercises will be distributed

Instructors will be present to work through problems

Lecture slides, definitions, examples

Afternoons (1–3ish): practice

Take-home exercises will be distributed

Instructors will be present to work through problems

Happy Hour (3ish--6ish)

Lecture slides, definitions, examples

Afternoons (1–3ish): practice

Take-home exercises will be distributed

Instructors will be present to work through problems

Happy Hour (3ish--6ish)

Just kidding

Contact your instructors at any time

(But you should feel free to ask questions throughout)

• Fundamentals, notation, functions

• Fundamentals, notation, functions

Tuesday: Linear algebra (Micah)

- Vectors and matrices
- Useful for manipulating real data

• Fundamentals, notation, functions

Tuesday: Linear algebra (Micah)

- Vectors and matrices
- Useful for manipulating real data

Wednesday: Calculus (Micah)

- Limits, derivatives, integrals
- How variables affect other variables

• Fundamentals, notation, functions

Tuesday: Linear algebra (Micah)

- Vectors and matrices
- Useful for manipulating real data

Wednesday: Calculus (Micah)

- Limits, derivatives, integrals
- How variables affect other variables

Thursday: Finish calculus, Probability (Micah/Mike)

- Mathematical intuitions of independent and conditional probability
- Probabilistic processes (random variables), patterns in "real data"

• Fundamentals, notation, functions

Tuesday: Linear algebra (Micah)

- Vectors and matrices
- Useful for manipulating real data

Wednesday: Calculus (Micah)

- Limits, derivatives, integrals
- How variables affect other variables

Thursday: Finish calculus, Probability (Micah/Mike)

- Mathematical intuitions of independent and conditional probability
- Probabilistic processes (random variables), patterns in "real data"

Friday: Finish probability, Maybe computer fun (Mike/Micah?)

Potentially: fundamentals of data in the computer (using R)

Deliverables?

Daily exercises (not collected)

No final exam (or grades of any kind)

You are in charge of yourselves

Questions?

• Covering lots of ground

- Covering lots of ground
- Everyone has a different background

- Covering lots of ground
- Everyone has a different background
- Please ask questions

- Covering lots of ground
- Everyone has a different background
- Please ask questions
- Open and accepting environment

- Covering lots of ground
- Everyone has a different background
- Please ask questions
- Open and accepting environment

Let us (Micah and me) know how we can make this work better

- Covering lots of ground
- Everyone has a different background
- Please ask questions
- Open and accepting environment

Let us (Micah and me) know how we can make this work better

- Ask lots of questions! They help the entire class!
- Slow us down
- Ask why we are learning something

Resources

The Github repository:

- Slides, exercises
- Source code to build it all

Other resources:

About your instructors

Mike DeCrescenzo

Roots in St. Louis and Kansas City, Missouri. Short stints in Berkeley, CA

Studies American politics & political methodology (since 2014)

Primary elections, gender and voting, voter identification requirements

Comparative advantage: Bayesian analysis (probability and statistics)

Email: decrescenzo@wisc.edu

Micah Dillard

A proud Ohio son (Columbus)

Studies international relations & political methodology (since 2014)

Economic sanctions, energy and foreign policy, non-traditional security

Comparative advantage: Formal theory (algebra and calculus)

Email: micah.dillard@wisc.edu

Let's get started
